PROFESSIONAL SUMMARY

Full stack web developer with a strong foundation in JavaScript, React, Java, Python, and SQL. Experienced in building complete applications independently, from interactive front-end interfaces to data-driven backend logic, including a live-data trading tool that integrates a third-party financial API. Quick to learn new frameworks and comfortable working across the stack. Seeking a full stack developer role to apply strong problem-solving skills and hands-on project experience to real-world products.

TECHNICAL SKILLS

Languages: JavaScript, Java, Python, SQL, HTML, CSS

Frameworks & Runtimes: React, React Native, Node.js, Spring

APIs & Databases: RESTful API integration, SQL (MySQL, PostgreSQL)

Testing: JUnit

Tools: Git, GitHub, Responsive Web Design

PROJECTS

Forex Trading Bot — React

Personal project

- Designed and built a forex trading analysis tool from scratch in React, including an interactive backtester with live parameter sliders and Recharts-based charting.
- Implemented a rules-based trading strategy combining EMA 9/21 crossover and RSI 14 filtering on EUR/USD (H4 timeframe), with ATR-based stop-loss/take-profit and 1% risk-per-trade position sizing.
- Integrated the Twelve Data API to deliver live EUR/USD price signals with automatic refresh.
- Currently developing a paper trading engine to simulate strategy performance in real time.

Personal Portfolio Website — HTML, CSS, JavaScript

Personal project (in development)

- Building a personal portfolio site from scratch using HTML, CSS, and JavaScript to showcase skills and projects.
- Focused on clean, responsive layout and semantic markup without relying on front-end frameworks.
